

Family Trees

A family tree is a bit like a map. Except, instead of showing you where you are in the world, it shows you where you are in your family.

Families can be very big. See how many family members you can count now, including aunties, uncles, cousins and grandparents. Did you have more than five? More than ten? Maybe you have even more family members than that!

Now imagine how you might show that on a piece of paper. Well, that's where a family tree comes in. It's called a 'tree' because it has branches (or lines) that show how a family is connected to each other.

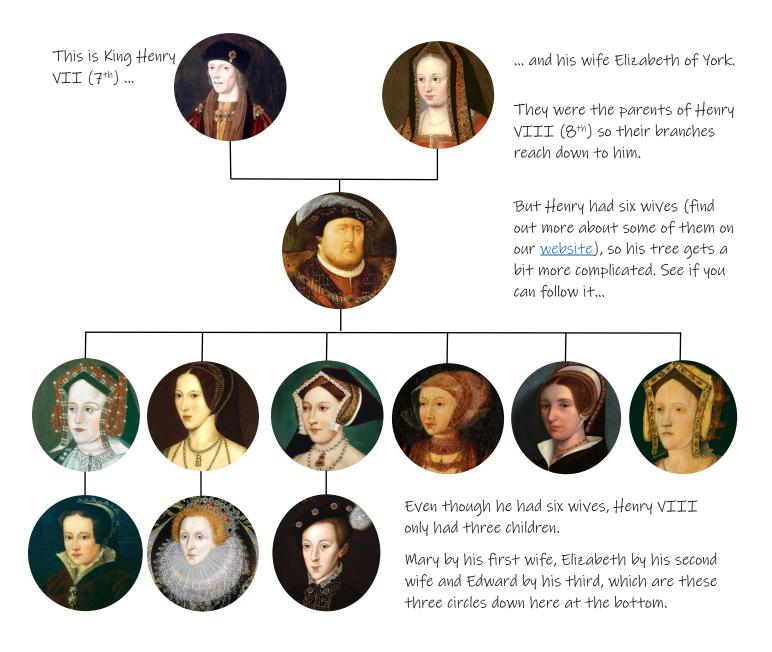

Here's an example:

Now try filling out your own family tree. We've given you a worksheet with labelled boxes to make it a little easier, but you might need to ask your parents about some of your older relatives (this is where family trees can get a little tricky).

We especially like to use family trees in history, because it makes it easier to see how Kings and Queens were related to each other.

Let me show you what I mean...

Can you imagine how hard it would be trying to understand Henry VIII's family without being able to see it like this? This is why family trees are important.

Now see who else's family tree you can create (suggestions; the current Queen, Simba from Disney's The Lion King movies and television series or Peppa Pig).
